2911 McKinley Dr. Santa Clara, CA 95051

## Skills

#### **Techniques**

Neural networks (Transformers, CNNs, GraphNN, Diffusion), Large Language Models (LLMs), SVMs, PCA, KNN, decision trees

#### Tools

PyTorch, TensorFlow, Numpy, Numba, Pandas, Sklearn, Flask, AWS, Google Cloud, Terraform, Pulumi, Docker, Metaflow, Kubernetes

#### Languages

Python, C/C++, Rust, SQL, C#, Java, Dart, Bash, HTML/CSS, Some Mandarin and Spanish

### Experience

### Senior Machine Learning Platform Engineer • Freenome

Aug 2022 - Jun 2024 (South San Francisco, CA)

- Led greenfield project building end-to-end scalable distributed machine learning platform using PyTorch, Ray, and Kubernetes for cancer detection from deep sequencing (methylated DNA) and protein data.
- Built scalable multitask learning, elastic net, and neural network based models with improved performance for classifying Colorectal Cancer risk from cell-free DNA data.
- Piloted a project to summarize biomedical literature using an LLM, first using GPT-4 and then via fine-tuning an open source LLM using DPO (direct policty optimization).
- Deployed and managed an organization-wide MLFlow based model tracking system for reproducibility, monitoring, and automated model performance reporting using Terraform, Pulumi, and Google Cloud.

#### Software Engineer - Machine Learning Engineering • Data Scientist (prior to 2020) - Ancestry Product 23andMe

Nov 2018 - Aug 2022 (Sunnyvale, CA)

- Built a large-scale feature engineering ETL pipeline for imputed SNPs (~10 million samples x ~1 million SNPs) using AWS Batch, Metaflow, AWS Glue, and AWS Athena used to feed downstream GWAS and Polygenic Risk Score (PRS) ML models.
- Improved PRS model AUCs and auPRC performance metrics through model stacking approaches.
- Developed and deployed (using MLFlow + AWS Fargate) Recent Ancestor Locations (RAL) a high precision, high recall country matching algorithm
  which serves >15 million customers worldwide.
- Improved graph-based techniques for unsupervised identification of populations by genetically based identity-by-descent (IBD) family relationships.

## Bioinformatician IV • Scripps Research

May 2018 - Oct 2018 (San Diego, CA)

 Developed a classifier for organ transplant rejection using RNA data and wrote pipelines for Nanopore long-read sequencers using Common Workflow Language.

## Independent Consultant • Juno Diagnostics

Sept 2017 - Feb 2018 (San Diego, CA)

 Developed patent – US20210020314A1 - Deep learning-based methods, devices, and systems for prenatal testing along with a Tensorflow based classifier for detecting prenatal genetic abnormalities from high throughput sequencing data.

## Data Science Fellow • Insight

Jan 2017 - Apr 2017 (Remote Session - San Diego, CA)

Built and deployed (as a Flask app on AWS EC2) DeepPixelMonster - a Tensorflow based GAN for creating pixel art, back when GANs were still
relatively state-of-the art.

### PhD Student Biology • UC San Diego • Scott A. Rifkin Lab

Aug 2010 - May 2017 (La Jolla, CA)

- Wrote DeepNuc a CNN model for classifying over 500,000 transcriptional start site (TSS) flanking sequences from humans, mice, fruit flies, and nematodes as well as for over 60,000 microRNA target sequences.
- Researched the role of RNA expression noise during animal development by imaging single molecule RNA expression data in >5,000 embryos and
  analyzing data using self-written MATLAB tools for image segmentation, fluorescence quantification, and image deconvolution.

## Education

Ph.D Biology UC San Diego, 2010 - 2017

B.A. Biological Sciences Genetics and Development, Magna Cum Laude Cornell University, 2006 - 2010

## Activities and interests

- Developing the VR game Rogue Stargun (https://roguestargun.com)
- Ludum Dare Game Jams
- 3D modeling with Blender3D
- Painting
- DuBlog (https://dublog.net) Self deployed using Google Cloud, Hugo, and Github Actions
